RevLite Laser Treatment for Age & Brown Spots

RevLite™ EO Q-switched Laser Technology

Introducing RevLite™ from HOYA ConBio™, the next generation of Q-switched laser technology — a multi-purpose, multi-wavelength aesthetic medical laser that offers maximum power and versatility for a broad range of indications on all skin types. RevLite™ utilizes an extremely high-speed shutter to produce nanosecond pulse widths, enabling highly effective procedures with less heat and increased safety. Featuring PhotoAcoustic Technology Pulse™, the RevLite™ delivers very narrow pulse widths at peak energy, even at larger spot sizes. Physicians report that the speed and power of RevLite™ can create a superior PhotoAcoustic rejuvenation effect, including a more refreshed appearance, a reduction in fine lines and wrinkles, smoother texture, tightening and decreased pore size. By providing patient satisfaction, functionality, versatility, and reliability with safety for all skin types the RevLite™ is changing the face of modern aesthetic medical laser treatment.

RevLite™ features a unique technology that sets it apart from standard lasers on the market. Most aesthetic medical lasers use longer pulses, subjecting the skin to excessive and potentially harmful heat. The RevLite's EO Q-switched engineering produces very rapid, short pulse widths of energy, limiting the healthy tissue's exposure to thermal build-up and offering safe, fast and effective treatment. This technology, pioneered by HOYA ConBio™, produces a PhotoAcoustic action to target the molecule versus a photothermal action delivered by other lasers. With the advent of the PhotoAcoustic Technology Pulse™ by RevLite™, which is characterized by a unique dispersion of maximum energy, physicians can harness very narrow pulse widths at peak energy with up to 60 percent more power than previous HOYA ConBio™ lasers. Physicians report that the RevLite™ technology is especially effective in producing a superior "PhotoAcoustic rejuvenation" effect, resulting in a more refreshed appearance, even skin tone, smoother texture, tightening and decreased pore size.

What conditions are treated with the RevLite laser?

- Wrinkles
- Acne scars
- Tattoo removal (Full-color Spectrum)
- Pigmented lesions
- Solar lentigos (sun spots)
- Senile lentigos (age spots)
- Café-au-lait birthmarks
- Becker's nevi
- Freckles and nevus spilus
- Vascular lesions
- Port-wine birthmarks
- Telangiectasias
- Spider and cherry angiomas
- Spider nevi
- Hair removal
- Dermal lesions
- Nevus of Ota
